CORE COMPETENCIES

Humir Construction, Inc. is a sewer engineering and construction company that designs, builds, modifies and repairs sewer main, water main and storm drainage systems for small communities, single dwellings, shopping malls, business centers, hotels, garages, schools and educational facilities, hospitals, lock-up units and industrial complexes. Our team of technical experts uses a unique approach to develop systems that are economical, easy to maintain and adhere to building regulations for capacity and sewerage flow.

The company also provides land excavation for site preparation, home and building foundations, utility and cable installations, swimming pools and other related tasks.

In addition, Humir Construction provides concrete flatwork, in decorative and basic styles, for streets, curbs, sidewalks, stairs and driveways.

Humir Construction employs a full-time team that includes operating engineers, concrete finishers and laborers. The company's equipment fleet includes excavators, rubber tire excavators, unloaders, a variety of compactors, from large to small, and service trucks.
